REPEATER
QUICK START GUIDE

1

REPEATER

POWER SUPPLY

Plug Repeater into power supply.

Each kit includes one PowerView Repeater and one power supply. Be sure the USB connector is firmly seated.
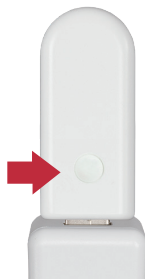

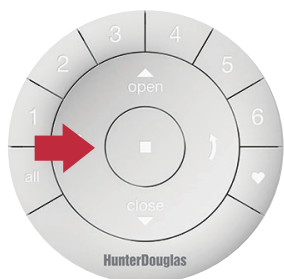

2

Plug power supply into wall outlet.

The green LED will come on to indicate the Repeater has power, but not yet been joined to a PowerView Shade Network. One Repeater per room with PowerView Window Coverings is recommended. Be sure the PowerView Repeater is pointing up and the wall outlet has power.

3

Pair Repeater to PowerView Shade Network.

1. Press and hold ■ Stop on the remote that was used to create the PowerView Shade Network, until the lights on the remote flash (approx. 4 sec.). **2.** With the remote no more than 3 feet from the Repeater, press and release ■ Stop. **3.** The Repeater LED will flash green once to signal it has now been joined to the PowerView Shade Network and then will turn off (Repeater is still active).

Resetting the Repeater

To reset the Repeater and put the Repeater in Learning Mode, press and hold the button on the Repeater until the green LED comes on, indicating the Repeater has power but has not been paired to a PowerView Shade Network.

Troubleshooting

■ My Repeater does not flash when I send a Test Repeater signal to it from the PowerView Hub.

- Make sure the Repeater is completely seated in the USB port on the power supply. Check that the outlet that the USB power supply is plugged into has power.

- Test the Repeater with a different USB power supply.

- Add the Repeater to the PowerView Shade Network. Refer to instructions in this guide.

Test signal to Repeater.

Press and hold the 📶 button on the back of the PowerView Hub. If you have not already paired the Repeater to the PowerView Shade Network via the Remote, pressing and holding the 📶 button will pair the Repeater. The light on the PowerView Repeater should flash **GREEN**. If it does not, you may need to move the location of the Repeater or add an additional Repeater.
